

**BARRIERS**

The barriers are the most suitable option to create security perimeters, for the channelling of people in large events and to indicate situations such as:

Roads in poor condition, accidents, tree pruning, reserved parking areas, unauthorized accesses, construction work, pedestrian crossing area, etc.

All DACAME barriers are connectable with each other thanks to their side connection system. DACAME barriers are made of S275 high quality steel.

**INCLINED**

- It is specially designed for sporting events such as cycling races or marathons. Ideal for the last metres or dangerous curves.
- The feet are oriented towards the inside of the barrier so that it is tilted and the cyclists or runners do not trip over them.

- 25x1,5
- 20x1

**WALKWAYS**

The walkways are designed to give passage continuity across ditches, stowage, etc.

The surfaces of the walkways are non-slip as they are made of "peanut" type plate.

The guardrails are removable. In working position they are secured with four snap pins.

**PL**

- With reflective bands on the crossbars of the guardrails.
- With anchors on the sides.
- Compatible with MINI barrier.
